

## Heat

Heat culminates the prior five works of Marc E. King. While King admits this text is more technical than he would like in order to appeal to as many readers as possible, the text truly follows the important everyday reader concepts from Changing Your Mind and Cold Fusion, Dignity of Mind. King says his insistence on mathematical proof should not deter the non-fiction reader who wishes to simply ignore some of the technical justifications. Non-technical readers are the most important, says King. He maintains that a book for physicists in denial is like a painting for unfortunate blind men. The text proves that the concept of temperature is in fact defined by the theory  $t=cB$ .
